

Talking to Your Child or Teen about Anxiety

Why is it important to talk about anxiety?

Children and teens often don't recognize their anxiety for what it is. Instead, they may think there is something "wrong" with them. Children may focus on the physical symptoms of anxiety (e.g. stomachaches). Teens may think they are weird, weak, out of control, or even going crazy! These thoughts might make them feel even *more* anxious and self-conscious. Therefore, the first step is to teach your child about anxiety and how to recognize it. Self-awareness is essential!

The Facts!

Myth: Talking to your child about anxiety will make them even MORE anxious.

Fact: Providing accurate information about anxiety can reduce confusion or shame. Explain that anxiety is a common and normal experience, and it can be managed successfully! Once your child understands this, he or she will feel more motivated to make life easier.

How to do it:

There are three steps to introducing the topic of anxiety to your child:

Step 1: Encouraging your child to open up about any fears and worries

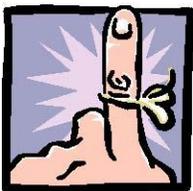

Step 2: Teaching your child about anxiety

Step 3: Helping your child recognize anxiety

Step 1: Encouraging your child to open up about worries and fears:

- Start by describing a recent situation when you observed some signs of anxiety in your child. *"Yesterday, when Sarah came over, you seemed very quiet and you just sat beside Mom. It seemed you may have been a bit nervous about having a visitor in our house. What was that like for you?"*
- Tell your child about some things you were scared of when you were the same age (especially if you shared the same types of fears), and ask if he or she has any similar worries or fears.
- Ask what worries him or her the most. You may have to prompt younger children by offering an example such as: *"I know some kids are scared of ____, do you have that fear too?"* Being specific can help your child sort through confusing fears and feelings.
- When your child expresses anxiety or worry, offer reassurance by saying you believe him or her, and that having those feelings is okay. Remember, your child will take cues from you.

Show acceptance of worry thoughts and anxious feelings. If you stay calm, it will help your child stay calm, too!

- **Tip:** Does hearing “*Don’t worry. Relax!*” help you when you’re anxious about something? It probably doesn’t comfort your child much, either. It’s important to acknowledge that your child’s fears are real. Your empathy will increase the chances that your child will accept your guidance, and discuss his or her fears with you in the future..

Step 2: Teaching Your Child about Anxiety:

Four important points to communicate to your child:

- 1. Anxiety is normal.** Everyone experiences anxiety at times. For example, it is normal to feel anxious when on a rollercoaster, or before a test. Some teens may appreciate some facts about how common anxiety problems are. For example, “*Did you know that one-in-seven children under 18 will suffer from a real problem with anxiety?*”
- 2. Anxiety is not dangerous.** Though anxiety may feel uncomfortable, it doesn’t last long, is temporary, and will eventually decrease! Also, most people cannot tell when you are anxious (except those close to you such as your parents).
- 3. Anxiety is adaptive.** Anxiety helps us prepare for real danger (such as a bear confronting us in the woods) or for performing at our best (for example, it helps us get ready for a big game or speech). When we experience anxiety, it triggers our “fight-flight-freeze” response and prepares our bodies to defend themselves. For instance, our heart beats faster to pump blood to our muscles so we have the energy to run away or fight off danger. When we freeze, we may not be noticed, allowing the danger to pass. This response is also called “anxious arousal”. Without anxiety, humans would not have survived as a species!

How you can explain the Fight-Flight-Freeze response to a child:

“Imagine you are hiking in the woods and you come across a bear. What is the first thing you would do? You may run away from the bear, or you may simply freeze. Another reaction is to yell and wave your arms to appear big and scary. There are three ways humans react to danger: fight, flee, or freeze. When we are anxious, we react in one of these ways, too. We may run away or avoid situations that make us anxious. Or we may freeze, such as when our minds go blank and we can’t think clearly. Or we may fight, get angry and lash out at people. Can you think of some ways you may fight, flee, or freeze because of anxious feelings?”

How to explain “anxious arousal” to a teen:

Sometimes when we sense something is dangerous or threatening, we automatically go into a state called “anxious arousal”. This can happen when there is a real danger, but also when something simply *feels* dangerous, but really isn’t, such as giving an oral presentation in class, or...(give an example of something relevant to your child). Anxious arousal makes you feel jittery, on edge, and uncomfortable. It may also make it hard to think clearly. This feeling can become overwhelming enough that anxious people stop doing things or going places that make them feel anxious. Do you think this is happening to you?

- 4. Anxiety can become a problem** when our body reacts as if in danger in the absence of real danger. A good analogy is that it’s like the body’s smoke alarm.

Being a Detective: Recognizing Avoidance

Ask your child to come up with as many answers as possible to the following:

If you woke up tomorrow morning and all your anxiety had magically disappeared, what would you do?

How would you act?

How would your family know you weren't anxious? (Your teacher? your friends?)

Finish the following sentences:

My anxiety stops me from....

When I am not anxious, I will be able to...

Once your child has gone through these three steps, and is able to understand and recognize anxiety, your child will be better prepared to move on to the next stage - learning how to manage anxiety!
